

## Mary Bridge Hospital

### Project:

Ascendent completed the asbestos abatement and complete structure demolition of the former Jackson Hall and Parking Garage at the Tacoma Mary Bridge Hospital Site. Extreme care and caution was required due to its proximity to the hospital which remained active with zero interruptions during completion of the demolition. Automated dust suppression cannons were used to manage dust generation, and demolition was performed in a manner that maximized recycling. Demolition and Abatement project size was just under **\$2 million** with a peak crew size of **30 field employees**. of the nearly **20,000 Tons of recycled** materials, **7,500 tons of concrete** remained on-site for re-use in new development.
